WORKING PAPERS / WORK IN PROGRESS

Credit Shocks and Populism (Job Market Paper) with Nicolò Fraccaroli

We investigate whether credit shocks affect the electoral support for populist parties. Our empirical approach exploits the spatial variation in exposure to an exogenous lending cut by a large German bank in 2007–08. Looking at voting intentions from individual-level survey data, we find that the exposure to the credit shock leads to a persistent increase in populist political preferences. To explore the shift in demand for populism

activated by the shock, we measure the degree of populist rhetoric and the salience of bank-related topics of each party over time using a machine learning procedure on the corpus of parliamentary speeches in Germany. We find that the credit shock rewards parties that adopt a more populist rhetoric and discuss bank-related topics more frequently. County-level aggregate analysis suggests that the perceived decay of the local economy – a result of the credit shock – is reflected through expressions of discontent in voters' political preferences. Individual level analysis of the causal effects of the credit shock suggests that the labour market history is the most important factor in shaping the response in populist preferences. Overall, we add to the literature on the financial drivers of populism, concluding that credit shocks are an important determinant of the recent rise of populism.

Learning from a Systemic Banking Crisis' Experience with Nicolò Fraccaroli
The Long-Run Impact on Borrowing Behaviour

Does the experience of a banking crisis has an effect on households' portfolios? We investigate this question by focusing on households that migrated to Germany between 1950 and the 2007 financial crisis. Combining data on migrants from 123 different countries with data on systemic banking crises, we identify the impact of the crisis' experience through the variation in the timing of arrival. We compare households' portfolios of those with a household head that experienced a systemic banking crisis in her country of ancestry with those that did not. Focusing on loan portfolios, we find that household that witnessed at least a crisis earlier in their life are less likely to hold consumer loans than those that never experienced a crisis. Moreover, we show that the probability of borrowing is lower for migrants who experienced multiple crises compared to those that experienced a single episode, suggesting a cumulative effect of banking shocks. We propose analogous evidence on real estate portfolios. Overall, our results suggest that the cost financial crises is not limited to the short-term effects driven by losses in wealth and income, but rather a long-lasting effect due to households changing their behaviour.

Volcanic Revolution with Jaakko Meriläinen, Matti Mitrunen and Jósef Sigurdsson
The Enduring Impact of the 1783 Laki Eruption on Collective Action

TEACHING EXPERIENCE

ECN400 Macroeconomic Theory and Policy Teaching Assistant, Fall 2020
Norwegian School of Economics (NHH) *Master's Level*

ECN401 Applied Microeconomic Theory Teaching Assistant, Spring 2020
Norwegian School of Economics (NHH) *Master's Level*

ECN402 Econometrics Teaching Assistant, Fall 2019 – Fall 2022
Norwegian School of Economics (NHH) *Master's Level*

ECO433 Empirical Strategies for Causal Analysis Teaching Assistant, Spring 2019
Norwegian School of Economics (NHH) *Master's Level*

PRESENTATIONS

2022 Instituto Tecnológico Autónomo de México (Political Economy Group, Mexico City). University of Gothenburg. FAIR Midway Conference 2022 (Sommarøy, Poster Session).

2021 Scandinavian PhD Seminar (online). EPSA Virtual Conference 2021 (*joint with co-author*). XXXII Villa Mondragone International Economic Seminar (*joint with co-author*, Rome Tor Vergata/online). 2nd Monash-Warwick-Zurich Text-as-Data Conference (online). IFABS 2021 Oxford Conference (Saïd Business School, Oxford/online). Stockholm University (SU Labor Fika, Microwave Seminar). Joint Bank of England, the European Central Bank, King's College London and King's Business School Conference on new methods and applications for macroeconomic policy (*joint with co-author*, London/online).

2020	Norwegian School of Economics (Friday Lunch Seminar, Emerging Research Seminar). INET/Young Scholars Initiative: New Economic Questions (Political Economy of Europe Working Group (*joint with co-author*), Financial Stability Working Group, online).
